                                                                                                                The present invention describes novel MLP proteins and their encoding bulss. The MLP proteins and DNAs have antilnfilammatory and cardiant activities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAs can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing or treating bone and joint diseases as well as pathologic angiogenesis.

AAF59063 to AAF59099 and AAB69122 to AAB69132 represent sequences used
          Safe, low-toxicity secretory cell function-regulatory protein and encoded DNA, applicable as drugs, in diagnosis and development of promoters and inhibitors for preventing or treating e.g. bone and joint
                                                                                                                                                                                                                                                                                                                                                                                                                                 ggagaattttggggctggcagtgtttatggtgatggccaggacgagatgggagtcgtgggt 240

The present invention describes novel MLP proteins and their encoding DNAS. The MLP proteins and DNAS have antiinflammatory and cardiant activities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAS can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing or treating bone and joint diseases as well as pathologic anglogenesis.

AAF59063 to AAF59099 and AAB69122 to AAB69132 represent sequences used
                                                                                                                                         Safe, low-toxicity secretory cell function-regulatory protein and encoded DNA, applicable as drugs, in diagnosis and development of promoters and inhibitors for preventing or treating e.g. bone and joint

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to an isolated novel secreted polypeptide (I) and polynucleotide (II). (I) and (II) are useful for treating cancer, autoimmuned diseases, wound healing disorder, infections, haematopoietic disorders, inflammatory disorders, infertility, neurological and psychiatric diseases, cardiovascular diseases, respiratory diseases, renal diseases, or gastrointestinal diseases. These may also be used to treat diseases, abnormalities and disorders caused by abnormal expression, production, function and/or metabolism of the genes, vaccines for inducing immunological response in a mammal, and in screening methods for detecting the effect of added compounds on the production of mRNA and polypeptide in cells. The polypeptides can be used to identify membrane-bound or soluble receptors. The polypuclides,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              nseq
                                                                                                                                                                                                                                                                                                                                                                                                                   New secreted proteins or polypeptides, useful for treating e.g. cancer, autoimmune diseases, wound healing disorder, infections, haematopoietic disorders, inflammatory disorders, infertility, cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          may be used as diagnostic reagents, in chromosome localisation studies, and in tissue expression studies. The present sequence represents the coding sequence of novel human secreted protein #12.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        aacgútaaaaaagggcagcagatctatgtgtactcaaagctggtaaaagaaaatggagct 180

```
Isolated human growth regulatory-like polypeptide useful for treating e.g. Alzheimer's disease, cancer, autoimmune disorders, hyperproliferative disorders, coagulation disorders, and nervous system
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence is that of Hyseq clone identification number 16372272, which was obtained from a human thymus CDNA library using standard PCR with primers specific for vector sequences flanking the inserts, sequencing by hybridisation sequence signature analysis, and Sanger sequencing techniques. This expressed sequence (see AAH26343) encoding a novel human growth requlatory-like polypeptide (GRLP, see AAB85671). The GRLP belongs to the same protein family as growth regulatory protein growth factors, human melanoma derived growth regulatory protein c precursor (64% similarity and 45% identity over 111 amino acids) or melanoma inhibitory activity, cattle cartilage derived continuity and solution of the second sensitive protein (CD-RAP) 44% identity and 64% intolicity and 64% identity and 64
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         production of protein, in the generation of antisense, ribozyme and peptide-nucleic acid molecules, and to produce transgenic animals
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           similarity over 126 amino acids) and other retinoic acid-sensitive proteins. GRLP polypeptides and polynucleotides of the invention can be used in the prophylaxis, treatment (including gene therapy) and diagnosis of disorders and diseases caused by, or involving,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          cartilage development and maintenance, inhibition of melanoma cell growth and tumours, including neuroectodermal tumours such as gliomas. The polynucleotides can also be used to design probes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             primers, for chromosome and gene mapping, in the recombinant

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                            The present sequence is that of a novel nucleic acid that was assembled from human thymus CDNA library-derived Hyseq clone identification number 1637277 (see AAH26341). A recursive algorithm was used to extend the clone by pulling additional sequences from different databases. A full-length sequence (see AAH26343) encoding novel human growth regulatory-like polypeptide (GRLP, see AAB82671) was subsequently obtained. Human GRLP belongs to the same protein family as growth regulatory protein procursor (64% similarity and 45% identity over 111 amino acids) or melanoma inhibitory activity, cattle cartilage-derived retinoic acid sensitive protein (CD-RAP, 44% identity and 64% similarity over 126 amino acids) and other retinoic acid sensitive protein (CD-RAP, 44% identity and 64% similarity over 126 amino acids) and other retinoic acid sensitive protein (CD-RAP, 44% identity and 64% similarity over 126 amino acids) and other retinoic acid sensitive protein (CD-RAP, 44% identity and 64% similarity over 126 amino acids) and other retinoic acid sensitive or melanoma in the prophylaxis, treatment (including gene therapy) and diagnosis of disorders and diseases caused by, or involving, cartilage development and maintenance, inhibition of melanoma cell growth and tumours, inncluding neuroectodermal tumours such as gliomas. The polynucleotides can also be used to design probes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 tata¢tatttctctggctagtgctcaagaagattataatgccccggactgtagattcatt 120

DNAS. The MLP proteins and DNAS have antiinflammatory and cardiant activities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAS can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing or treating bone and joint diseases as well as pathologic angiogenesis.

e.g. Alzheimer's disease, cancer, autoimmune disorders, hyperproliferative disorders, coagulation disorders, and nervous system Isolated human growth regulatory-like polypeptide useful for treating disorders

Liu C;

Claim 1; Page 115-116; 119pp; English.

human growth regulatory like polypeptide (GRLP, see AABB2671).
The sequence was assembled using human thymus CDNA library-derived
Hyseq clone identification number 1637272 (see AAB2631) as seed,
using software programs to pull additional sequences from Hyseq's
proprietary database containing expressed sequence tag sequences,
and by gel sequencing using primers to extend both 5' and 3' ends.
The predicted protein has a mol.wt. of 14 kDa unglycosylated. GRLP
belongs to the same protein family as growth regulatory proteins
c growth factors, human melanoma derived growth regulatory protein
precursor (64% similarity and 45% identity over 111 amino acids)
or melanoma inhibitory activity, cattle cartilage-derived
c retinoic acid sensitive protein (CD-RAP, 44% identity and 64%
similarity over 126 amino acids) and other retinoic acid-sensitive
proteins. GRLP polypeptides and polynucleotides of the invention growth and tumours, including neuroectodermal tumours such as glidmas. The polynucleotides can also be used to design probes and primers, for chromosome and gene mapping, in the recombinant production of protein, in the generation of antisense, ribozyme and production of protein, in the generation of antisense, ribozyme and peptide-nucleic acid molecules, and to produce transgenic animals. They may also have cytokine and cell proliferation or ribozyme and differentiation activity, stem cell growth factor activity, haematopoiesis regulating activity, tissue growth activity, immunosuppressive or immunostimilate activity, nemostatic and thrombolytic activity, use in cancer diagnosis and therapy, activity, and treatment of leukaemia, nervous system disorders, arthritis and inflammation. GRLP can be used in the prophlaxis, treatment (including gene therapy) and diagnosis of disorders and diseases caused by, or involving, cartilage development and maintenance, inhibition of melanoma cell The present sequence is that of a novel nucleic acid encoding

The present invention describes novel MLP proteins and their encoding DNAs. The MLP proteins and DNAs have antiinflammatory and cardiant activities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAs can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing or treating bone and joint diseases as well as pathologic angiogenesis.                                                                                                                  The present invention describes novel MLP proteins and their encoding bulss. The MLP proteins and DNAs have antiinflammatory and cardiant activities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAs can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing or treating bone and joint diseases as well as pathologic angiogenesis. AAF59063 to AAF59099 and AAB69122 to AAB69132 represent sequences used

                                                                                                                                                                                                             The present invention describes novel MLP proteins and their encoding DNAs. The MLP proteins and DNAs have antiinflammatory and cardiant activities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAs can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing or treating bone and joint diseases as well as pathologic angiogenesis.

The present invention describes novel MLP proteins and their encoding DNAs. The MLP proteins and DNAs have antiinflammatory and cardiant activities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAs can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing or treating bone and joint diseases as well as pathologic anglogenesis. AAF59063 to AAF59099 and AAB69122 to AAB69132 represent sequences used
                                                                                                                                                                                                                                         Safe, low-toxicity secretory cell function-regulatory protein and encoded DNA, applicable as drugs, in diagnosis and development of promoters and inhibitors for preventing or treating e.g. bone and joint

The present invention describes novel MLP proteins and their encoding DNAS. The MLP proteins and DNAS have antiinflammatory and cardiant excitvities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAS can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing or treating bone and joint diseases as well as pathologic angiogenesis.
                                                                                                                                                                                                                                                                                                                                                        Safe, low-toxicity secretory cell function-regulatory protein and encoded DNA, applicable as drugs, in diagnosis and development of promoters and inhibitors for preventing or treating e.g. bone and joint

```
The present invention describes novel MLP proteins and their encoding DNAs. The MLP proteins and DNAs have antiniflammatory and cardiant activities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAs can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing or treating bone and joint diseases as well as pathologic angiogenesis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention describes novel MLP proteins and their encoding brass. The MLP proteins and DNAs have antilnflammatory and cardiant activities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAs can be used in drugs, in the diagnosis and adevelopment of promoters and inhibitors for preventing or treating bone and joint diseases as well as pathologic angiogenesis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                         The present invention describes novel MLP proteins and their encoding by MDAs. The MLP proteins and DNAs have antinflammatory and cardiant activities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAs can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing or treating bone and joint diseases as well as pathologic angiogenesis. AAF59063 to AAF59099 and AAB69122 to AAB69132 represent sequences used in the exemplification of the present invention.
encoded DNA, applicable as drugs, in diagnosis and development of promoters and inhibitors for preventing or treating e.g. bone and joint
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Isolated **Luman growth regulatory-like polypeptide useful for treating e.g. Alzheimer's disease, cancer, autoimmune disorders, hyperproliferative disorders, coagulation disorders, and nervous system
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

The present sequence is charton. The among a consideration of the present sequence is charton. The among a monoton sequence is predicted from a novel assembled cDNA (see AAH26343) based on Hyseq clone number 1637227. The protein has a mon. Wt. of 14 kba unglycosylated. GRLP belongs to the same protein family as growth regulatory proteins, growth factors, human melanoma derived growth regulatory proteins. Growth factors, human melanoma derived growth regulatory proteins. Growth factors inhibitory activity, cattle cartlinge-derived retinoic acid sensitive protein (CD-RAP, 44% identity and 64% inhibitory activity, cattle cartlinge derived similarity over 126 amino acids) and other retinoic acid sensitive proteins. GRLP polypeptides and polynucleotides of the invention can be used in the prophylaxis, treatment (including gene therapy) cartlinge development and maintenance, inhibition of melanoma cell growth and tumours, including neuroectodermal tumours such as and alfarentiation activity, stem cell growth factor activity, may also have nutritional uses, cytokine and cell proliferation or differentiation activity, stem cell growth factor activity, immunostimic activity, haemostatic and thrombolytic activity, use in cancer diagnosis and therapy, drug screening, receptor/ligand activity, antiinflammatory atthritis and inflammation.
                                                                           present sequence is that of a novel human growth regulatory-like
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          0; Gaps

                                                                                                                                                                                                                                                                                              ö
                                                                                                                                        The present invention describes novel MLP proteins and their encoding by MLS. The MLP proteins and DNAs have antinflammatory and cardiant activities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAs can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing to treating bone and joint diseases as well as pathologic angiogenesis. AAF$5003 to AAF$5099 and AAB$0122 to AAB$0122 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Isolated human growth regulatory-like polypeptide useful for treating e.g. Alzheimer's disease, cancer, autoimmune disorders, hyperproliferative disorders, coagulation disorders, and nervous system
                                                              Safe, low-toxicity secretory cell function-regulatory protein and encoded DNA, applicable as drugs, in diagnosis and development of promoters and inhibitors for preventing or treating e.g. bone and joint

polypeptide (GRLP) mature protein. The sequence is predicted from a novel assembled cDNA (see AAH26343) based on Hysaq clone number a novel assembled cDNA (see AAH26343) based on Hysaq clone number (16372272. The protein has a mol. Wt. of 14 kDa unglycosylated. GRLP belongs to the same protein family as growth regulatory proteins, growth factors, human melanoma derived growth regulatory proteins, or melanoma inhibitory activity, cattle cartilage derived retinoic acid sensitive protein (CD-RAP, 44% identity and 64% is amiliarity over 126 amino acids) and other retinoic acid sensitive protein (CD-RAP, 44% identity and 64% is similarity over 126 amino acids) and other retinoic acid sensitive protein (CD-RAP, 44% identity and 64% is amino acids) and oplynucleotides of the invention can be used in the prophylaxis, treatment (including gene therapy) and diagnosis of disorders and diseases caused by, or involving, cartilage development and maintenance, inhibition of melanoma cell growth and tumours, include the GRLP mature protein, cartilage development and maintenance inhibition of melanoma cell and contains. The polypeptides, which include the GRLP mature protein, cartilage development and maintenance inhibition of melanoma cell cartilage development and maintenance of the GRLP mature protein, cartilage development and maintenance of the GRLP mature protein, cartilage development and maintenance of the GRLP mature protein, cartilage development and maintenance of the contains and 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           6 DRLASKKLCADDECVYTISLASAQEDYNAPDCRFINVKKGQQIYVYSKLVKENGAGEFWA 65

                                                                                                                                                                            The present invention describes novel MLP proteins and their encoding burs. The MLP proteins and DNAs have antinflammatory and cardiant activities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAs can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing or treating bone and joint diseases as well as pathologic angiogenesis. AAF59063 to AAF59099 and AAB69122 to AAB69132 represent sequences used in the exemplification of the present invention.
                                                                              Safe, low-toxicity secretory cell function-regulatory protein and encoded DNA, applicable as drugs, in diagnosis and development of promoters and inhibitors for preventing or treating e.g. bone and joint
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  χ.

                                                                       The present invention describes novel MLP proteins and their encoding DNAs. The MLP proteins and DNAs have antiinflammatory and cardiant activities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAs can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing to read and joint diseases as well as pathologic angiogenesis. AAF55063 to AAF55099 and AAB69122 to AAB69132 represent sequences used in the exemplification of the present invention.

The present invention describes novel MLP proteins and their encoding MNAs. The MLP proteins and DNAs have antinflammatory and cardiant activities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAs can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing or treating bone and joint diseases as well as pathologic angiogenesis. AAFS9063 to AAFS9099 and AAB69122 to AAB69132 represent sequences used in the exemplification of the present invention.
function regulators. The MLP proteins and DNAs can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing or treating bone and joint diseases as well as pathologic angiogenesis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention describes novel MLP proteins and their encoding DNAs. The MLP proteins and DNAs have antiinflammatory and cardiant activities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAs can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing or treating bone and joint diseases as well as pathologic angiogenesis. AAF59063 to AAF59099 and AAB69122 to AAB69132 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 encoded DNA, applicable as drugs, in diagnosis and development of promoters and inhibitors for preventing or treating e.g. bone and joint diseases

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This protein has melanoma-inhibiting activity and can be used to treat cancer (melanoma, glioblastoma, neuroblastoma, small cell lung aancer, neuroectodermal tumours) or as an immunosuppressant lung aancer, neuroectodermal tumours) or as an immunosuppressant peripheral blood lymphocytes). Antibodies raised against the protein can be used to detect cell producing the protein and also for protein purification. Probes derived from DNA encoding the protein (AAQ84050, AAQ84051) can be used to detect sequences encoding the protein (AAQ84050, AAQ84051) can be used to detect sequences encoding the protein (AAQ84050, CAAQ84050).

protein and/or its fragments that have anti-inflammatory effects and induce systemic immune tolerance or specific T-cell tolerance to MIA antigen. for manufacturing a preparation is inflammatory diseases and for induction of systemic immune tolerance or specific T-cell tolerance in patients suffering from or susceptible to inflammatory diseases. A fragment of MIA is useful as a therapeutic substance and is useful for manufacture of pharmaceutical preparations against inflammatory diseases such as an immune-cell mediated cartilage of destruction disease, specifically rheumatorid arthritis, autoimmune diseases like Graves disease, juvenile arthritis, primary glacuses, systemic lupus erythematosis, inflammatory bowel disease, mustiple sclerosis or diabetes. The MIA polypeptides have specific effect on the autoreactive T-cells thus leaving the other components of the immune system intact as compared to the non-specific suppressive effect of immunosuppressive drugs. The present sequence represents a
The invention relates to the use of melanoma inhibiting activity (MIA)

Antibodies raised against the protein can be used to detect cell producing the protein and also for protein (AAQ84052) can be used to detect sequences encoding the protein (AAQ84052) can be used to detect sequences encoding the protein or related proteins. The protein may be expressed as a fusion protein (conjugated with dihydrofolate reductase (DHFR)).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New melanoma inhibiting protein and related nucleic acid -vectors, transformed cells, antibodies etc., useful for treating tumours and as immunosuppressant e.g. by gene therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This protein has melanoma-inhibiting activity and can be used to
                                                                                                                                                                    Melanoma inhibiting protein (murine).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to the use of melanoma inhibiting activity (MIA) protein and/or its fragments that have anti-inflammatory effects and induces systemic immune tolerance or specific T-cell tolerance to MIA antigen, for manufacturing a preparation against inflammatory diseases and for induction of systemic immune tolerance or specific T-cell tolerance in patients suffering from or susceptible to inflammatory diseases. A fragment of MIA is useful as a therapeutic substance and is useful for manufacture of pharmaceutical preparations against inflammatory diseases such as an immune-cell mediated cartilage destruction disease, specifically rheumatoid arthritis, autoimmune diseases like Graves' disease, juvenile arthritis, primary glomerulonephritis, polyarthritis, osteoarthritis, Sjogren's syndrome, myasthenia graveis, addison's disease, primary bilary sclerosis, uveitis, systemic lupus erythematosis, inflammatory bowel disease, multiple sclerosis or diabetes. The MIA polypeptides have specific effect on the autoreactive T-cells thus leaving the other components of the immune system intact as compared to the non-specific suppressive effect of immunosuppressive drugs. The present sequence represents a compared to the non-specific suppressive converted and a human recombinant MIA(his7) protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          3;

WPI; 2000-237889/20. N-PSDB; AAZ51245 Nucleic acids encoding human and murine TANGO 130, a melanoma-inhibiting protein homolog, useful for modulating cell proliferation and differentiation -

Claim 9; Fig 3; 128pp; English.

The present amino acid sequence is the human TANGO 130 protein

(hTANGO130). The gene is mapped to chromosomes 4pl, 7, 14q and 18pl.

(human TANGO 130) has highest expression in testis and also in heart, brain, placenta, liver, lung, skeletal muscle, pancreas, kidney, spleen, thymus, prostate and uterus. It has cytostatic and immunomodulatory activity. TANGO 130, a homologue of melanoma-inhibiting protein (MIA), inhibits growth of melanocytes and may be used to treat malignant melanomas, chondrosarcomas and metastatic tumours. They serve as serum markers for diagnosis and mentastatic tumours. They serve as serum markers for diagnosis and mentastatic tumours. They serve as serum markers for diagnosis and monitoring disease states. TANGO 130 inhibits abnormal or malignant proliferation of cells of the heart, liver, testis, kidney, immune system, CNS, skeleton, epithelial cells (e.g. carcinomas and melanomas). It modulates cell-cell interactions (e.g. call adhesion or cell-substrate interactions), cell migration (e.g. abnormal migration and metastasis of tumour cells), cell differentiation, rethiod acidemediated functions/activities, like modulation of AP2 transcription
